Year 8 Maths Challenge

There was a general in charge of an army. When he asked them to get into groups of 2, there was one soldier left over. When he asked them to get into groups of 3 there was one left over again. He asked them to group in 4's, 5's, 6's, 7's, 8's, 9's and 10's, and each time the same thing happened - there was always one left over! BUT, when he asked them to get into groups of 11, they managed to do it exactly!
How many soldiers were in the general's army?
